Diversity of LNG Plant Capacity

Filippo Meacci
Manager, LNG Engineering and Operations
ConocoPhillips
ConocoPhillips and LNG

- Under Construction
- Under Development
- Retired
Important Themes for Diversity of LNG Plant Capacity

• Collaboratively develop standardized/modularized designs to expedite FEED and then execute projects on schedule & within budget
• How new players differentiate themselves from traditional operators
• Designing LNG plants with optimum capacity and operational stability for the long term
• LNG market fluctuations are changing operating requirements (turnup/turndown capability and flexibility in production)
• Key parameters of future LNG plants are evolving (environment and life cycle cost evaluation)
